 - 1.5 Application Manager View
 - 1.6 UI Policy Design
 - 1.7 Record Producer Design
 - 1.8 Service Portal Design

1. PROJECT DESIGN PHASE

1.1 System Architecture

The system architecture represents the flow of an employee issue from the user interface to the backend record. The employee accesses the Service Portal and selects the **Raise an Issue** option. The **Raise an Issue Widget** provides navigation to the **Raise Employee Issue Record Producer**. The Record Producer collects the employee's issue details and creates a record in the **Employee raises issue** custom table. **UI Policies** control the behavior of fields on the form based on the configured conditions.

Employee → Service Portal → Raise an Issue Widget → Raise Employee Issue Record Producer → UI Policies → Employee raises issue Table → Employee Issue Record

1.2 Application Design

A custom scoped application was created to manage employee issues.

The major components are:

- Custom Scoped Application
- Custom Employee Issue Table
- Custom Fields
- UI Policies
- Record Producer
- Service Portal
- Custom Widgets
- Raise Employee Issue Form

1.3 Custom Table Design

A custom table was created to store employee issue information. The table acts as the backend data source for the application.

The implemented table contains fields such as:

- Assignment Group
- Category
- Created
- Created By
- Number
- Priority
- Requester

- Short Description
- State
- Subcategory

The screenshot shows the 'Employee raises issue' table fields configuration in ServiceNow Studio. The table has 13 fields with the following details:

Column label	Column name	Type	Reference	Max length	Default value	Display	Updated
Assignment Group	assignment_group	Reference	Group			☐	2026-08-21
Category	category	Choice				☐	2026-08-21
Created	sys_created_on	Date/Time				☐	2026-08-21
Created by	sys_created_by	String		40		☐	2026-08-21
Number	number	String		40	javascript:global.ge...	☐	2026-08-21
Priority	priority	Choice				☐	2026-08-21
Requester	requester	Reference	User			☐	2026-08-21
Short description	short_description	String		40		☐	2026-08-21
State	state	Choice				☐	2026-08-21
Subcategory	subcategory	Choice				☐	2026-08-21
Updated	sys_updated_on	Date/Time				☐	2026-08-21

1.4 Application Components

The ServiceNow Studio application view shows the custom application and its configured application components, including the custom table and Record Producer.

The screenshot shows the 'Employee Center' application components in ServiceNow Studio. The application is a custom application with the scope 'x_2085838_employee_0'. The components are listed as follows:

Name	Type	Updated	Updated by	Created by
Employee raises issue	Table	2026-08-28 04:46:51	System Administrator	System Administrator
Raise Employee Issue	Record Producer	2026-08-28 06:35:54	System	System Administrator
x_2085838_employee_0.employee_raises_iss...	Role	2026-08-28 03:34:18	System Administrator	System Administrator
x_2085838_employee_0.admin	Role	2026-08-28 03:28:51	System Administrator	System Administrator
x_2085838_employee_0.user	Role	2026-08-28 03:28:51	System Administrator	System Administrator

Figure 2. Custom Scoped Application and Configured Application Components

1.5 UI Policy Design

UI Policies are used to control the behavior of fields on the form.

They can be used to make fields mandatory, visible/hidden, or read-only based on defined conditions.

Figure 3. UI Policy Configuration for the Employee Issue Form

1.6 Record Producer Design

The Record Producer provides an employee-friendly form for submitting an issue.

The process is:

Employee opens form → Enters details → Submits form → Record Producer processes information → Custom table record is created

Figure 4. Raise Employee Issue Record Producer Configuration

1.7 Service Portal Design

A Service Portal was configured to provide the user interface for employees.

The portal contains:

- Homepage
- Employee issue service
- Raise Employee Issue option
- Navigation/interface for accessing the service
